

**Important: Keep cap on tight between uses.
Store at room temperature.**

EASY SINGLE DIP INSTRUCTIONS FOR USE:

For illustrated, step-by-step directions, refer to Dr. H. Tueau's Complete Guide to Pool and Spa Care.

Remove an AquaChek Test Strip from the bottle and replace cap tightly. Dip the test strip into your pool or spa and remove immediately. Hold strip level for 15 seconds (do not shake excess water from strip). Compare Total Hardness, Total Chlorine, Free Chlorine, pH and Total Alkalinity pads (in that order) to the color chart on the front of this comparator. Record the results in the Test Log section of the Guide to Pool and Spa Care.

Once the tests have been conducted and the results logged, refer to the treatment charts in the Guide to Pool and Spa Care to correct any imbalances.
