#### 6a. CUSTOM SAFETY COVER - AB Measurement Instructions

AB Measurements are required for a freeform pool or pools that have had a prior safety cover. If you are replacing a safety cover, you will need to provide 2 set of AB Measurements. 1st Set of AB Measurements is for the perimeter of your pool. 2nd Set of AB Measurements is to each anchor location. Start by sketching a diagram of the pool on paper. Include location and detail of your pool deck and any non-removeable obstructions, such as slides, dive stands, grab rails and ladders that lie within 18 inches of pool edge.

1. **Using chalk or masking tape to establish your AB plot line:** Start from 4 feet away from the pool edge, or 3 feet away from the anchors if replacing a cover, plot a line along the length of the pool. The line should not intersect the pool in any direction and should be **at least 2/3 the length** of the pool.

2. **Mark plot points around the perimeter of the pool approximately every 3 feet:** Mark your pool deck in roughly 3 foot intervals around the pool perimeter, and numbering each point around the pool. Number all corners, rail locations (front and back of rails) or other obstructions if they are not removable and within 18 inches of the pool edge. When tight curves, rocks, waterfalls or similar obstructions are encountered, mark at one foot intervals.

3. **Measure to each plot point from Point A:** Attach or have a partner hold one end of a tape measure at Point A, measure to each point, starting at point one, and record in the corresponding box A1 on the measuring form. Continue measuring to each point around the pool perimeter and record each measurement. Repeat from Point B to each plot point in numerical order.

If you are replacing a Safety Cover (matching your existing anchors) repeat step 3 using the same AB Plot Point, measuring to each anchor from A and B. Be sure to start at the same anchor for your B measurements as you did for A.

4. **Verify pool length and width:** Choose a numbered plot point in the shallow end, add a numbered plot point in the deep end, and record the measurement between the two points to represent overall pool length. Do the same across the widest point of the pool to represent pool width.
